INTERESTING FACTS ABOUT THE NIGHTINGALE

Nightingales have a rich repertoire, able to produce over 1000 different sounds.

Nightingales build nest on or just above the ground level.

Nightingales feed mainly on insects, mainly through foraging on the ground, and in particular are partial to ants and beetles.

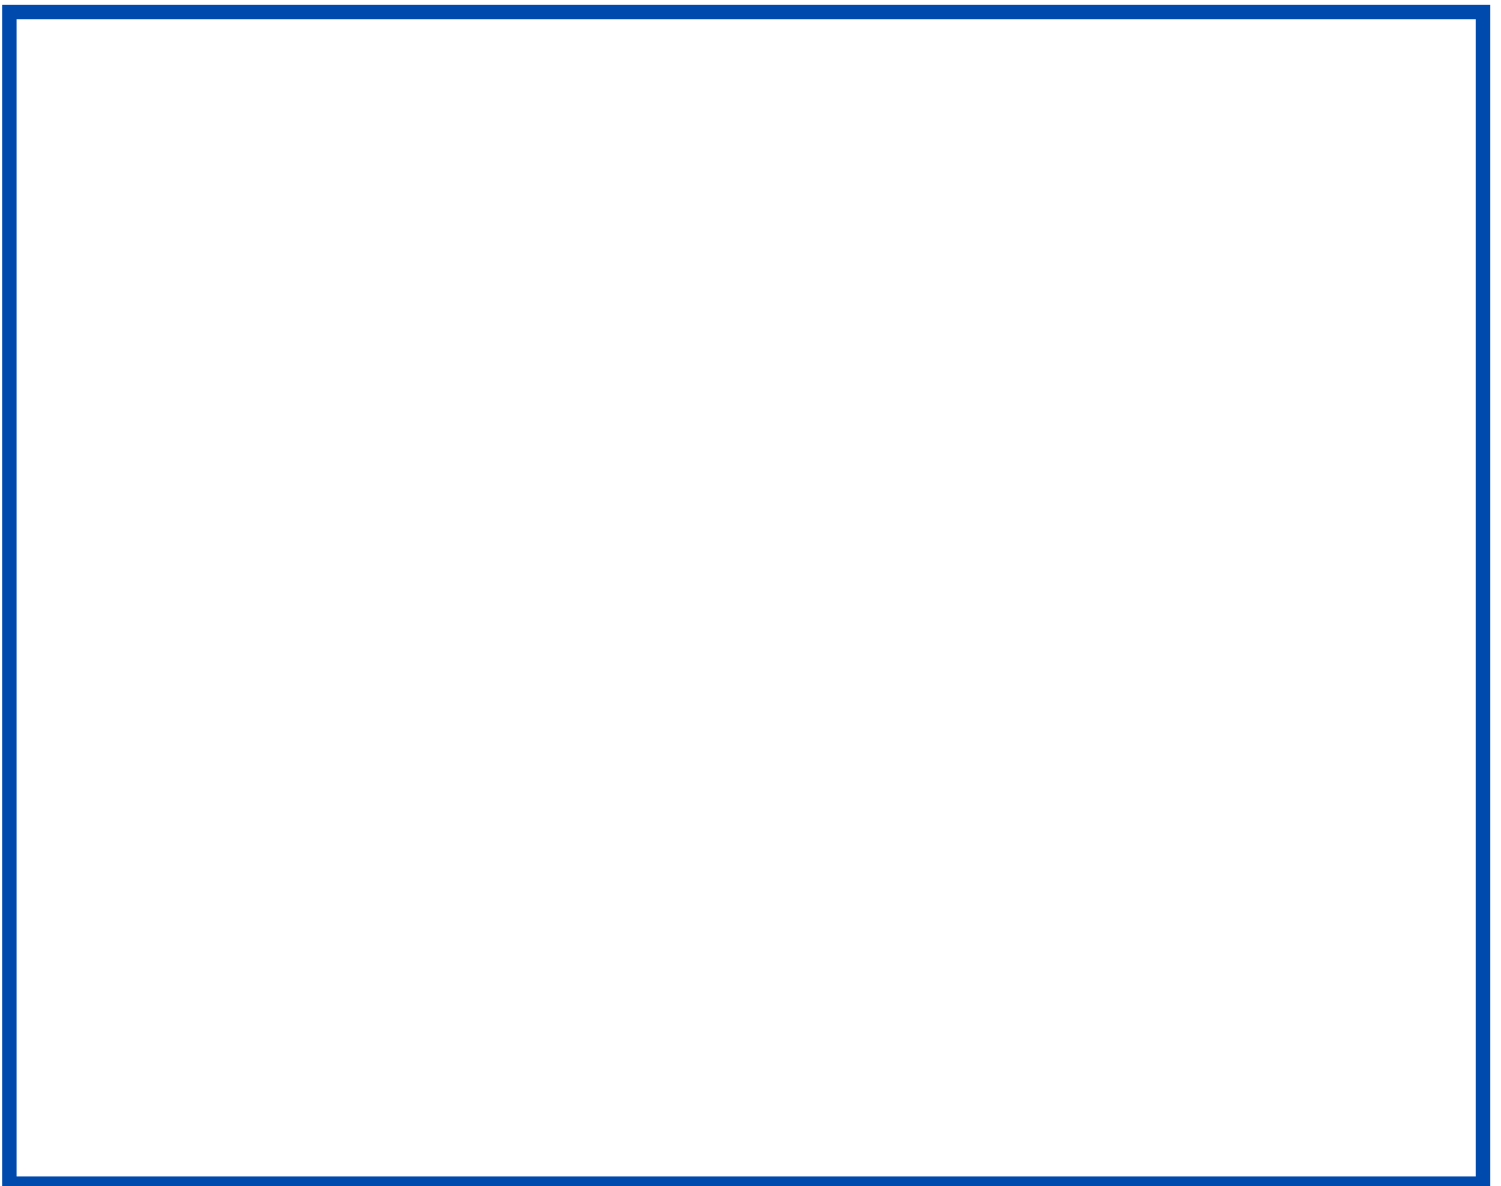

Male nightingales that sing throughout the night are thought to be single birds, trying to serenade migrating females down as they fly over.

SKETCH A NIGHTINGALE

SKETCH A SUNFLOWER

sunflowers face the rising sun because increased morning warmth attracts more bees and also helps the plants reproduce more efficiently.
